100% CAN  ILDIAN

AMORE ULTIMA

Since 1994, Amore International has been perfecting the art of achieving the “Ultimate Gel Nail System”. Amore Ultima Gel Nail System is a comprehensive gel nail system created for discerning nail technicians. Each component in the line is carefully chosen and tested for function and quality, creating a line of “handpicked” high performance gels. Amore Ultima delivers exceptional results—thin, flexible, non-yellowing nails resilient enough for your most demanding client.

Most Amore base components are designed to stand alone, or work together, allowing nail professionals to customize their work. No longer bound to the parameters of one product, technicians can create the ideal viscosity, color and strength for **ULTIMATE** control and creativity.

Beyond the fundamentals, Amore recognizes that nails are not just functional...they are a fashion statement. Nail professionals are not only adept, they are artistic. Amore stays on top of the latest color and art trends. Their high quality Colour systems give techs a wide variety of options to create and explore.

The System

Bonding/Base- Base component for all gel enhancement applications.

Available in 8/15/30/120 ml sizes.

Bonder Bonder is an ultra-thin, self-leveling, clear base that provides maximum adhesion with a built in primer. Bonder should be used as the base for all Amore product nail enhancements.
UV Curing Time: Freeze: 20 seconds

Sculpting/Building/Troubleshooting-Amore's variety of sculpting/building components will allow you several options for sculpting the perfect nail enhancement. Most are available in 8/15/30/120 ml sizes.

Clear Violet

Translucent Pink

Sculpt & Shine Sculpt and Shine has been our best-selling product for 24 years! It is a medium viscosity, clear sculpting product that offers maximum flexibility while still being strong enough to sculpt out an extension. This unique formula self-levels and holds the apex but will not flood the cuticles and sidewalls while sculpting. It also doubles as a high shine top coat. Builder gel can be added to it to alter its consistency as desired (a little goes a long way!) It's minimal heat transfer allows for client comfort. Available in translucent pink or clear violet.

UV Curing Time: Freeze: 20 seconds Full Cure: 2minutes

Crystal Sculpt Crystal Sculpt is a thin, self-leveling, crystal clear sculpting gel with maximum strength. It will allow you to create thinner, stronger nails. The strength and rigidity of this product makes it great for sculpting extensions. It's minimal heat transfer allows for client comfort.

UV Curing Time: Freeze:20 seconds Full Cure: 2-3minutes

Cool

Warm

Cache Pink Cache Pink is a thin-medium viscosity, pink toned, sculpting gel with just enough pigment to camouflage imperfections on the nail plate while not completely covering it. Provides a soft pink tone, and creates contrast with any white for a beautiful french. Use a little or a lot depending on how much coverage you desire. It will self-level for a smooth application with minimal heat transfer. Available in Cool or Warm tone

UV Curing Time: Freeze:20 seconds Full Cure: 2 minutes

Sculpting/Building/Troubleshooting Continued

Conceal Conceal Pink is a medium thick viscosity, self-leveling, full coverage pink sculpting gel that is great for covering a free edge, extending a nail bed, or creating a full nude nail. Conceal must be applied to a buffed nail or dispersion layer for optimal results. Due to its high pigmentation, it needs to be applied in thin layers when sculpting.

UV Curing Time: Freeze: 20 seconds Full Cure: 3 minutes

Builder Builder is a thick viscosity, non-leveling, clear building gel that allows you to create an apex that will stay where you put it without leveling or flooding the cuticle/sidewalls. It can help provide extra durability and strength when sculpting extensions. Because of its thick viscosity, if applied too heavy, it will have high heat transfer. Adding a small amount of builder to Sculpt & Shine can be done to alter viscosity of Sculpt & Shine to suit every tech's needs.

UV Curing Time Freeze: 20 seconds Full Cure: 2 minutes

Pink Troubleshooter Pink Troubleshooter (formerly Pink Builder) is an ideal troubleshooting product for problem lifting! It's unique, self-leveling, but ultra-thick viscosity, allows for precise application around the cuticle to help with trouble lifters. It has high flexibility to help enhancements adhere to flat/flexible/moist nail plates. Pick up a small amount with a dotting tool and apply around the cuticle over your cured layer of bonder, flash cure, and then continue with regular gel application. -Pink Troubleshooter can be mixed with Sculpt and Shine to lighten its viscosity.

UV Curing Time: 20 second freeze Full Cure: 2-3minutes

Gloss/Finish—Amore's variety of gloss/finishing components will allow you several options for finishing the perfect nail enhancement. Most are available in 8/15/30/120 ml sizes.

Clear Violet

Gloss Top Gloss Top is a thin, self-leveling finishing gel that adheres to shiny surfaces and cures to a scratch resistant shine. Available in clear violet or translucent pink.

UV Curing Time: Full Cure: 2-3 minutes

Translucent Pink

Gloss/Finish Continued

Crystal Gloss Crystal Gloss is a crystal clear, super thin, self-leveling, rigid finishing gel that cures to an extremely scratch resistant, high shine.

UV Curing Time: Full Cure-2-3 minutes

Satin Finish Satin Finish is a self-leveling top coat that cures to an elegant satin/matte finish. Simple to use, NO stirring or shaking required. Satin Finish goes on thin and lasts! Available in 8/15/30ml

UV Curing Time: UV Full Cure-2-3 minutes

Shimmer Ice Shimmer Ice is a self-leveling finishing gel that leaves nails with a beautiful diamond shimmery finish. Apply to a buffed, clean nail or dispersion layer. Perfect for the client that wants that extra sparkle.

Available in 8/15/30ml

UV Curing Time: UV Full Cure-2-3 minutes

Whites-Amore's variety of white gel components will allow you several options for creating the perfect french extension or french fill. Most are available in 8/15/30/120 ml sizes.

Self Level White Self-Level White is our most natural, self-leveling, sculpting white with a medium-thick viscosity. It can be used for a fill or for sculpting a free edge. Its unique properties will allow you to have complete control yet will self-level to a smooth finish.

UV Curing Time: Freeze: 20 seconds Full Cure: 2 minutes

White White is a warm tone, white sculpting gel. It has a thick viscosity that will self-level but not run. It is great for sculpting a new set or for fills. It's thick, self-leveling viscosity allows you to swipe the perfect smile line every time.

UV Curing Time: Freeze: 20 seconds Full Cure: 2 minutes

Whites Continued

Optima White Optima White is a bright, crisp, cool toned sculpting white. Its thick viscosity allows you to have complete control over the product. It does not level and will stay where you place it. Because it is highly pigmented, it should be applied in thin layers when sculpting a free edge.

UV Curing Time: Freeze: 20 seconds Full Cure: 2 minutes

Suprema White The newest member to the Amore Whites, Suprema is fast becoming the most popular white in the Amore French lineup. Suprema is a creamy, cool, highly pigmented white. Its medium viscosity will allow you to sculpt all 5 nails at once, will not run or move once placed, and will self-level for a smooth surface. Perfect for sculpting a new set or for fills.

UV Curing Time: Freeze: 30 seconds Full Cure: 3 minutes.

Ultra White Ultra White is a medium viscosity, self-leveling highly pigmented french fill white. Its high pigmentation allows for thin, crisp application. This product is meant for fills and is not recommended for form work. For best results work with thin layers.

UV Curing Time: Freeze: 20 seconds Full Cure: 2 minutes

Swiss Sparkle Swiss Sparkle is a medium-thick white gel that has a beautiful sparkle, giving it depth and shimmer for a classic look. Available only in 15ml

UV Curing Time: Freeze: 20 seconds Full Cure: 2 minutes

Our Philosophy on UV/LED

After 24 years of bringing great UV products to the market, we are often asked why we don't incorporate UV/LED gels into our system. The short answer is that our UV system works-and has for 24 years! Re-formulating our current products to a UV/LED format changed the properties of the products that thousands of people already know and love! The bottom line is that a UV lamp allows more time for complex chemical reactions to occur, resulting in a better finished product (especially when it comes to thicker sculpting/building products) We believe that the best place for UV/LED formulations is when it comes to colour (thinner products)! Hence our UV/LED FX Colour line! For more information, try taking a class with one of our fabulous educators.

Colour Systems**

Prisma Colour Gels—Our original colour line released in 2008, Prisma Colour gels deliver a beautiful polished finish for gel nail enhancements. Available in frost, standard colors(no frost), neons, and primary art colours. These easy to apply self-leveling gels are thin and flexible. The perfect solution for lasting colour on fingers and toes. Available in 8 ml size.

Prisma Colour Application Tips

- ~Two coat coverage.
- ~Must be stirred before use
- ~Self-Leveling
- ~Can be embedded or applied over a sculpted nail.
- ~Finish with Gloss Top of choice.

UV Curing Time: Full Cure: 2 minutes

Prisma Pixie Gels—Prisma Pixie Gels are the crème de la crème of glitter gels. These formulations combine different sizes of high grade micro glitter mixed in a medium viscosity, self-leveling base that keeps the glitter suspended, so you never have to mix them. Great for art, full coverage, or just a little bit of bling. Available in 8 ml size.

Prisma Pixie Application Tips

- ~Can be used to sculpt a free edge with a skeleton layer (Does not apply to the Dream Series)
- ~Can be applied over a complementary colour for more dimension.
- ~Self-Leveling
- ~Can be embedded or applied over a sculpted nail.
- ~Finish with Gloss Top of choice.

UV Curing Time: Full Cure: 2 minutes

****For the most up to date Colour Selection chart, visit www.amoreinternational.com**

Colour Systems Continued**

Prisma Elite Gels—These highly pigmented gel paints can be applied in one coat for a rich, consistent full coverage or for fine line work in art applications. There is no top coat necessary as it cures to a high shine with NO dispersion layer, but if you want to create a more scratch resistant surface choose one of our Amore Ultima Gloss Top Gels that adhere to shiny surfaces. Available in flat colours, shimmers and glitters. Available in 8ml size.

Prisma Elite Application Tips

- ~You can embed Elites if desired, but these colours go on so smooth and thin that they are great for applying over a finish filed nail.
 - ~Because they cure to a high shine, you can use them for art on top of your gloss.
 - ~When applying lighter colours, it is best to use a larger brush head (Amore twin brush #8) and apply to a smoothly buffed surface. Let it settle into itself before curing.
 - ~Self-Leveling
 - ~Great for applying chrome powders.
 - ~Mixing these colors with other colour lines is not recommended.
 - ~some colours require mixing before use (ie-Gnarly Navy)
- UV Curing Time: Full Cure: 2 minutes

Prisma FX Gels—Prisma FX is an array of UV/LED curable gel colours and dry additives that will feed your creative spirit and give you the tools you need for vibrant, unique nail art effects! The Prisma FX UV/LED gel colours include a wide variety of finishes and viscosities from highly pigmented glitter, flat colours, shimmering pearl finishes, bold metallics, and cat eyes. Colours available in 8ml. Dry Additives in 5g.

Prisma FX Application Tips

- ~Can be embedded or applied over a finish filed nail, depending on your preferred method.
 - ~When applying lighter colours, it is best to use a larger brush head (Amore twin brush #8) and apply to a smoothly buffed surface. Let it settle into itself before curing.
 - ~FX Dry Additives can be used for anything from sugaring to being mixed into clear gel, or just dusting into a dispersion layer.
- UV/LED Curing Time: Full Cure: UV 2 min LED 90 sec

Support Products

Sani Prep Sani Prep is a great troubleshooting product. If you do not currently use a pre-service dehydrator you could experience unnecessary lifting and bond issues in general.

-Once nails have been filed, thoroughly remove dust, spray each nail and remove with nail wipe or hand towel. Available in 125ml/500ml/Litre sizes.

Finish Wipe Finish Wipe is an alcohol-based cleanser that must be used to remove the dispersion layer from cured gels. Available in 125ml/500ml/Litre sizes.

Non-Acid Primer The Amore Ultima Gel Nail System is primerless, but we know that some of you still feel comfortable using a primer or have clients with difficult nails. As such, we are pleased to offer this effective Non-Acid Primer. This is a universal product that will work with both gel and acrylic systems.

-Apply sparingly to the natural nail and let DRY for 30 seconds. Product will remain slightly tacky. Proceed with regular gel enhancement application. Available in 15ml.

Quick Seal Amore Quick Seal is a tack free, rigid, non-yellowing nail enhancement sealant. This product has many different uses. Available in 15 ml.

- ~Apply to the underside of the free edge for clients with separation or use to keep the under-side of the nail clean.
- ~Seal 3D nail art designs
- ~Use on Gel Toes to avoid the "stickies"
- ~Top coat your color wheels
- ~Use with chrome powders
